

AI Use Disclosure

This disclosure explains where Kindred uses AI, what context may be supplied, and the limitations of AI-generated output.

VERSION 1.0	DATE August 24, 2026
SOLE PROPRIETOR Landon Syroid d/b/a Kindred Asterling AI Coaching	STATUS Published

1. Scope & Purpose

Kindred Asterling AI Coaching ("Kindred", "we", "us", or "our"), operated by Landon Syroid as an Alberta sole proprietorship based in Edmonton, Alberta, Canada, integrates generative artificial intelligence to deliver conversational coaching, guided self-reflections, habit tracking, and structured personal summaries.

This Disclosure outlines where and how artificial intelligence operates within the Kindred platform, the technical and contextual boundaries enforced, and our strict adherence to Canadian privacy principles and consumer transparency standards.

2. Where AI Is Used

Artificial intelligence is utilized within the Kindred platform strictly for the following functions:

- **Conversational Coaching Dialogue:** Generating interactive coaching prompts, reflective inquiries, and conversational responses based on user-initiated messages.
- **Self-Assessment Summaries:** Synthesizing user-submitted morning check-ins, evening reflections, body scans, and goal tracking into periodic progress overviews.

3. Context Minimization & Privacy Architecture

Kindred enforces strict technical constraints to ensure user data minimization:

- **Interaction-Scoped Context:** The context assembly engine retrieves only data categories relevant to the immediate user prompt rather than injecting complete historical archives into each AI prompt.
- **User-Isolated Tenancy:** All retrieval operations are strictly bounded to the authenticated user's account and governed by character and item limits.
- **Provider Data Use:** Personal reflections, journal logs, habit metrics, and chat conversations may be sent to the AI provider configured for the service, currently Anthropic. The applicable model provider's retention and training terms must be verified and disclosed before production use.

4. Inherent Limitations & Operational Boundaries

Users acknowledge and agree to the following inherent limitations of automated AI systems:

- **Probabilistic Output:** Generative AI produces probabilistic text. Outputs may occasionally be incomplete, inaccurate, or inconsistent with prior outputs.
- **No Human Knowledge or Professional Credentials:** Kindred is an automated software application. It possesses no human emotion, sentience, independent real-world knowledge, or professional certifications.
- **Non-Consequential & Non-Clinical Utility:** Kindred outputs are intended solely for personal reflection and organizational wellness. They must not be relied upon as the sole basis for consequential personal, legal, financial, or medical decisions.

5. Technical Infrastructure & Providers

- **AI Inference:** Coaching replies are generated by Anthropic's Claude models through the Anthropic API, processed in the United States. Anthropic's commercial API terms govern how long it retains these requests.
- **Cloudflare AI Gateway:** Where requests are routed through Cloudflare AI Gateway, Kindred turns off request payload logging and response caching. Gateway usage metadata may still be retained.

6. Canadian Privacy & Generative AI Standards

This disclosure is structured to align with the Joint Principles for Generative AI Technologies issued by Canadian Federal, Provincial, and Territorial Privacy Authorities (including the Office of the Privacy Commissioner of Canada - OPC and the Office of the Information and Privacy Commissioner of Alberta - OIPC), upholding the principles of:

- **Meaningful Consent & Transparency:** Clear notification prior to user interaction with automated systems.
- **Appropriate & Proportional Purpose:** Restricting AI processing strictly to legitimate wellness coaching features.
- **Individual Access & Rectification:** Enabling users to inspect, export, and delete AI-generated summaries and chat histories upon request.
