4. Technical Record-Keeping & Proof of Consent

To satisfy CASL evidentiary requirements, the database must capture an immutable audit log for every consent event:

- Identifier: Verified user email address and account ID.
- Timestamp: ISO 8601 UTC timestamp of affirmative opt-in.
- Source Form & URL: Registration screen, checkout modal, or profile preference page.
- Exact Policy Version: Text and version identifier of the consent clause displayed.
- IP Address & User Agent: Network telemetry recorded at the time of submission.
- Withdrawal Tracking: Date, time, and method of unsubscribe requests, with automatic suppression across all integrated email delivery services (e.g., Resend).

5. Separation of Transactional vs. Marketing Communications

Service-related communications (such as password resets, billing receipts from Helcim, mandatory security alerts, and direct coaching notifications requested by the user) are transactional messages and must not be bundled with promotional opt-ins or suppressed upon marketing unsubscribe.
