# AI Use Disclosure

This disclosure explains where Kindred uses AI, what information the AI receives, who provides it, and the limits of AI-generated replies.

| **SOLE PROPRIETOR**<br>Landon Syroid d/b/a Kindred Asterling AI Coaching | **STATUS**<br>Published |

## 1. Scope & Purpose

Kindred Asterling AI Coaching ("Kindred", "we", "us", or "our"), an Alberta sole proprietorship operated by Landon Syroid in Edmonton, Alberta, Canada, uses generative AI to write coaching replies. This disclosure explains where AI is used, what information it receives, who provides it, and its limits.

When you chat with Kindred, you are talking to an AI system, not a person.

## 2. Where AI Is Used

- Coaching chat: AI writes the coach's replies to the messages you send. Onboarding questions are pre-written, but your onboarding answers become part of the conversation history the AI sees.
- Voice (when you use it): your recording is transcribed to text by ElevenLabs before it is sent to the coach, and the coach's reply may be read aloud using an AI voice.

AI does not make decisions about your account, access, billing or eligibility.

## 3. What Information the AI Receives

For each coaching reply, the AI provider receives:

- The message you just sent and recent conversation history (up to the last 24 messages).
- Your preferred name and any profile details you chose to give: birthday, bio, struggles, strengths and interests.
- When relevant to what you are discussing, recent records from your account: morning check-ins, evening reflections, body scans, habits and streaks, and today's medications, including names, doses, status and notes.

Kindred selects only the categories that relate to your current message, from your own account only, and limits how many records and characters are sent. It does not send your whole history with every message.

## 4. AI Providers & Data Use

- AI model: coaching replies are generated by Anthropic's Claude models through the Anthropic API, processed in the United States. Anthropic's commercial API terms govern how long it keeps requests. Under those terms, Anthropic does not use API requests to train its models.
- Kindred does not use your conversations or wellness information to train AI models.
- Analytics: where our coaching-chat analytics are switched on, Amplitude (United States) receives the text of chat messages and replies, with automated redaction of personal identifiers. See section 4 of our Privacy Policy.
- Your control: you can download your conversations with "Download my data" and delete them by deleting your account.

## 5. Limits of AI

- AI output is probabilistic. Replies can be inaccurate, incomplete, inconsistent or inappropriate.
- The AI has no feelings, professional credentials or clinical training, and it does not know facts about you beyond what is described in section 3.

- Do not rely on AI replies as the only basis for health, legal, financial or other important decisions, and never in an emergency. See our Health Information Disclaimer.

## 6. Canadian Privacy Principles for Generative AI

This disclosure follows the Principles for responsible, trustworthy and privacy-protective generative AI technologies issued in December 2023 by Canada's federal, provincial and territorial privacy commissioners, including the Office of the Privacy Commissioner of Canada and the Office of the Information and Privacy Commissioner of Alberta. In particular, we:

- Tell you that you are interacting with AI and what information it receives.
- Limit AI use to the coaching features you ask for.
- Let you access, download and delete your conversations.
